

Aleksandr Kocherga

Profile

Senior Frontend Engineer (React / TypeScript) with 5+ years of experience building scalable, production-grade web platforms. Frontend tech lead with a track record of architecture ownership, design systems, and full-stack delivery with Node.js. Experienced in leading engineering teams and shipping enterprise products with strong business impact.

Senior Frontend Engineer

Employment History

Frontend Developer → Senior Frontend Engineer & Tech Lead at Severstal

Mar, 2021 - May, 2026

Worked on internal enterprise software for a global industrial manufacturing company, progressing from Junior Frontend Engineer → Senior Frontend Engineer → Tech Lead.

Started as one of two engineers building a greenfield internal product that later evolved into a company-wide platform and grew into a cross-functional team with product managers, analysts, backend, and DevOps. Led a frontend team of 4 engineers and owned frontend architecture, tooling, and development processes.

Key responsibilities and achievements:

Led frontend architecture and technical decisions across several enterprise products., Built and maintained complex React applications for production planning, quality management, and defect analysis., Designed scalable modular architecture patterns that reduced incidents and made release cycles faster., Refactored legacy applications and migrated them to Redux Toolkit, Reatom, and Vite, improving frontend performance by ~35%., Worked closely with backend, product, design, and ML teams on API design and system integration., Built and maintained an internal design system and UI kit based on design tokens., Worked full-stack (React + Node.js/Express) during the first two years of the project.

Selected projects:

3D Production Site Tours — virtual walkthrough platform that lets leadership inspect construction progress remotely, with live production data., Steel Grade Calculator — simulation system used by R&D teams to validate new steel-grade hypotheses and improve product quality., Defect Visualization Platform — web application integrated with computer-vision systems for steel-sheet defect analysis and production optimization., Planning & Quality Management Systems — workflow tools that improve task tracking, accountability, and production quality., All Forms — company-wide form and survey platform that grew from a two-engineer initiative into a fully funded product, where I led a frontend team of four engineers.

Frontend stack:

React, Redux / Redux Toolkit, Reatom, MobX, TypeScript, Next.js, ant-design, Material-UI, Apollo Client GraphQL

Backend stack:

Node.js, Express, TypeScript, PostgreSQL, TypeORM, MongoDB

AI-assisted development:

Used AI coding assistants and self-hosted LLMs deployed entirely on-premise, within the company's internal network. Due to the sensitivity of the data, all development ran in a closed environment with no reliance on external cloud AI services.

Frontend Developer & Instructor at Standard Data

Sep, 2020 - Mar, 2021

Worked on an e-learning platform — a web product for online courses and training. Built and maintained reusable UI components and a shared design system, and helped

Skills

Core

React, TypeScript, Next.js, JavaScript (ES6+), HTML5 & CSS3

State management

Redux Toolkit, Reatom, MobX

Data & API

GraphQL, Apollo Client, REST API

Styling & UI

TailwindCSS, Material UI, Ant Design

Backend

Node.js, Express, PostgreSQL, MongoDB, TypeORM

Tooling & DevOps

Vite, Git, CI/CD, Docker

AI-assisted development

Claude, Cursor, ChatGPT

Workflow

Agile/Scrum, Jira, Figma

Education

Elbrus Bootcamp — Full-stack Developer (intensive program), 2020 · St. Petersburg, Russia

Ural State Technical University — Bachelor's Degree, 2010 – 2011 · Ekaterinburg, Russia

Languages

Russian: Native

English: B1, actively working toward B2

develop interactive learning modules. Also worked as an instructor: started as a teaching assistant and later taught the basics of JavaScript, HTML, and CSS.

Tech stack:
HTML, CSS, JavaScript, React

Frontend Developer at Freelance

Feb, 2020 - Sep, 2020

Built websites and landing pages for small businesses and startups using JavaScript, HTML, and CSS, with some basic PHP fixes when needed. Maintained existing sites and kept their content up to date. Set up simple testing, version control, and deployment workflows, and communicated directly with clients to deliver projects end to end.

Tech stack:
HTML, CSS, JavaScript
